

This document outlines the proper procedure for operating the Dual Cable Latch on a TrailerTail® Trident.

1 Close TrailerTail® to engage main latch.

2 Hook the loose carabiner to the Footman Loop on the outside of the Lateral Panel.

The secondary cable latch should be used whenever the trailer is the front trailer (Trailer A) of a Long Combination Vehicle configuration.

The usage of the cable latch is mandatory in this scenario.

Not using the secondary cable latch will cause damage to the TrailerTail® when the AutoDeploy™ system deploys the TrailerTail®.
