STEMCO GAFF special formulated polyurethane performs exceptionally at maintaining alignment, transferring acceleration and braking forces, and providing stability and ride comfort.

STEMCO GAFF products provide superior mechanical properties, outstanding chemical resistance and improved design features.

STEMCO GAFF recommends inspection of the suspension arm and bracket to make sure they meet manufactures specifications. If Easy Torque feature is not used for tightening the bolt, follow manufactures torque specifications. Different style bushings should not be installed on the same axle. Best practice is replacing both bushings at the same time. Two kits per axle are needed.

The first step in using STEMCO Kaiser products is SAFETY FIRST SAFETY ALWAYS. Please take a moment to make sure these safety precautions are in place. Some components are heavy! For your protection wear safety shoes, safety glasses, safety gloves, use proper lifting techniques and secure the unit before work begins.
